jamieeverett.co.uk

I'm a Bristol-based Senior Software Engineer at One Strategy Studio, building AI-driven products with C#/.NET, Azure, SQL and Blazor. I use AI throughout my engineering work and I'm developing collaborative agent workflows, from backlog refinement through implementation, testing and review.

SKILLS01

Languages & Frameworks

C# .NET 8 Blazor React MAUI WPF Entity Framework

Cloud & Data

Azure Azure SQL SQL Server SignalR DevOps / CI-CD

Engineering Practice

AI-assisted development System architecture API design xUnit / TDD

Leadership

Team leadership Mentoring Backlog refinement Roadmapping

EXPERIENCE02

■ One Strategy StudioJuly 2026 – Present

Senior Software Engineer

Building AI-driven products with C#/.NET, Azure, SQL and Blazor. I use AI throughout my engineering work and I'm developing collaborative agent workflows, from backlog refinement through implementation, testing and review.

■ InductosenseNov 2023 – July 2026 · Bristol, UK

Ultrasonic NDT monitoring software for the oil & gas industry, serving 100+ enterprise customers worldwide.

Software Engineering ManagerFeb 2025 – July 2026

Promoted through team election – peer recognition of technical and leadership capability.

- Implemented code review processes and development standards, raising quality while maintaining delivery velocity.
- Created project roadmaps across multiple products, improving visibility and resource planning for stakeholders.
- Established 1:1 feedback sessions and technical mentoring programmes to support team development.

Senior Software EngineerSept 2024 – Feb 2025

- Led architecture and development of iDART2, a next-generation platform built with .NET MAUI Blazor Hybrid for cross-platform deployment.
- Designed offline-first architecture with dual sync: device-to-local (USB / Bluetooth) and local-to-cloud (SQL Express → Azure SQL via SignalR).
- Built an enterprise installer handling complex install / uninstall workflows and dependency management.
- Drove adoption of unit testing with xUnit, covering critical code paths and reducing regressions.
- Cut Azure costs by ~£1,500/month through elastic pool implementation and decommissioning unused services.

Software EngineerNov 2023 – Sept 2024

- Developed features across desktop and cloud applications using .NET, Blazor, and Entity Framework.
- Contributed to database synchronisation systems handling data flow between field devices and Azure cloud.

C# .NET 8 MAUI Blazor Hybrid Azure SQL SignalR Entity Framework xUnit

- Malvern Panalytical

Graduate SE → Software Engineer

Nov 2020 – Nov 2023 · Bristol, UK

International leader in scientific instrumentation producing Windows-based .NET desktop applications.

■ Developed and maintained .NET desktop applications — new features and technical fixes across multiple codebases.

■ Established CI/CD infrastructure on Azure DevOps across teams, including build-agent setup and documentation.

■ Designed automated testing frameworks, reducing regressions and improving release confidence.

■ Led procurement and installation of specialised XRF equipment; Radiation Protection Supervisor for the Bristol office.

C#

.NET Framework

Azure DevOps

WPF

NUnit
- BMT

Software Developer · Industrial Placement

Jun 2018 – Jun 2019 · Bath, UK

Year-long placement at a world-leading defence consultancy, rotating across teams for full-stack experience.

■ Upgraded a legacy C# application for GDPR and ISO 27001 compliance, implementing encryption and secure authentication.

■ Developed SQL scripts for a Ministry of Defence data restructuring project, liaising directly with MOD stakeholders.

■ Prototyped a blockchain solution within one month, presenting findings to development leadership.

■ Provided first-line customer support via ticketing system and phone alongside development.

EDUCATION

BSc (Hons.) Computing — First Class Honours
University of Plymouth · 2016 – 2020 · Certificate of Professional Industrial Experience
Database Analysis & Design **88%** Distributed Applications **82%** Software Project Management **77%**
